MathWorks

R2026a Release Highlights

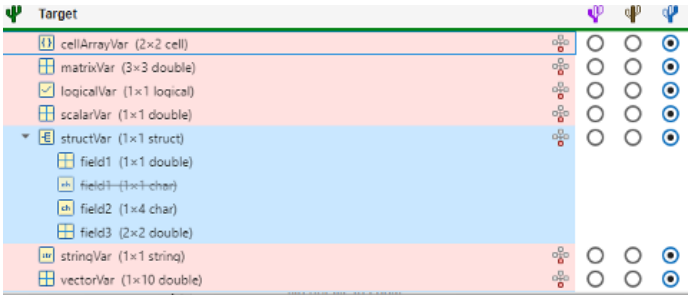
What's New in MATLAB® R2026a?

Environment, Language, Mathematics & Graphics

Merge Tool

Resolve conflicts in MAT files using Three-Way Merge Tool

In R2026a,. If conflicts occur in MAT files during a merge operation, you can now view and resolve the conflicts using the Three-Way Merge tool.



For more information, see **Resolve Conflicts in MAT Files**.

Introspection

Get information about function and method

You can programmatically get information about function signatures and arguments using the **function metadata interface**.
To access this information, use **metafunction** to create a **matlab.metadata.Function** instance. **metafunction** also works for class methods, returning a **matlab.metadata.Method** instance.

ode Objects

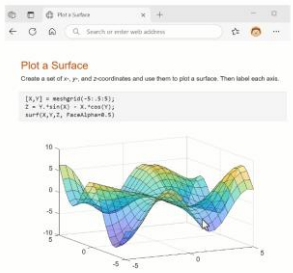
Calculate Jacobians using automatic differentiation

You can use the **JacobianMethod** property of an ode object to specify whether the solver calculates the Jacobians for a given problem using finite differences or automatic differentiation.

Web Canvas

Create webpages with interactive Graphics

Create HTML files containing interactive web canvases directly from your MATLAB plots and live scripts.

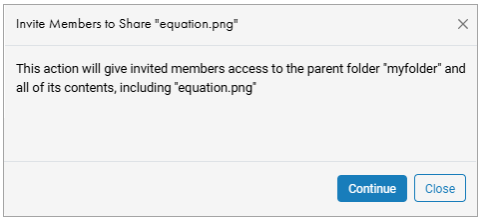


For more information, see **Display Interactive Graphics in Web Pages**.

MATLAB Desktop

Share files in MATLAB Drive from MATLAB

You can now share a file stored in MATLAB® Drive™ directly from MATLAB.

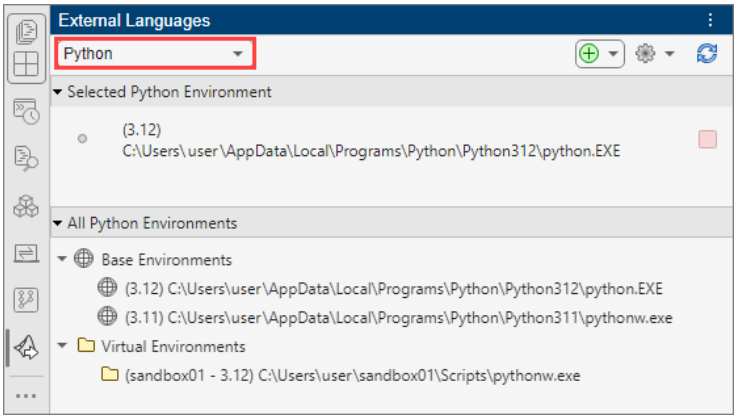


For more information, see **Share Files Using MATLAB Drive**.

External Language Panel

Manage Python Environments Using External Languages Panel

You can use the Python® view in the External Languages panel to configure and maintain your Python environments directly from MATLAB®.



For more information, see:
Manage Python Environments Using External Languages Panel.

Project API

Create project object without opening the project,
Edit referenced project without opening it as top-level project

You can now create a project object for a project that is not loaded or open.
You can programmatically edit referenced projects without opening them a stop-level projects.

```
mainProj = openProject("MyTopLevelProject");
refProj = mainProject.ProjectReferences.Project;
addFile(refProj,"newFile.m");
```
