

What's New in MATLAB® for Generative AI?

AI Coding

MATLAB MCP Core Server

Connect to existing MATLAB sessions

You can now connect the **MCP Core Server** to your existing MATLAB session. Running the **shareMATLABSession()** function, the MCP server will connect to this MATLAB with "**--matlab-session-mode=existing**" argument.

Define custom MATLAB-based MCP tools

You can expose any MATLAB function as an MCP tool defined in a JSON file. The server loads your tool definitions at startup and registers them alongside the built-in tools.

 For details, see [Use Custom Tools with the MATLAB MCP Core Server](#)

MCP Framework for MATLAB Production Server

Expose MATLAB functions as AI-accessible tools via the MCP

Publish your MATLAB® functions to MATLAB Production Server™ as MCP tools. This allows AI agents to call your functions, enhancing their capabilities with domain-specific expertise.

 For details, see [MCP Framework for MATLAB Production Server](#)

MCP endpoint request metric in MATLAB Production Server

New metric, **MCP_Framework_Request**, which uses Production Server's Prometheus integration to keep track of how many times server's MCP endpoint is hit.

Agentic Toolkits

MATLAB Agentic Toolkit

Brings trusted MATLAB capabilities to AI agents

The toolkit connects your AI agent to MATLAB and equips it with expert knowledge – the workflows, conventions, and best practices to make the best use of MATLAB while minimizing token burn. Your agent learns to write idiomatic code, generate and run tests, diagnose errors, build apps, etc.

 For details, see [MATLAB® Agentic Toolkit](#)

Simulink Agentic Toolkit

Work effectively with Simulink and Model-Based Design

The Simulink Agentic Toolkit packages MathWorks® Model-Based Design expertise for AI coding agents. It enables your AI coding agent to read, build, edit, and test Simulink® models using Model-Based Design best practices.

 For details, see [Simulink Agentic Toolkit](#)

Agent Resources & Development

MATLAB Skills

Pre-built skills for coding agents

A collection of Agent Skills for MATLAB development using coding agents. **>> Live Script Generator, Test Creator & Execution, Performance Optimizer, uihhtml App Builder, Digital Filter Design**

 For details, see [MATLAB Skills for Coding Agents](#)

MATLAB Coding Guidelines

Recommended coding standards with Code Analyzer integration

The **Coding Guidelines** contain **Rules** and **Best Practices**.

Best Practices are guidelines that contain recommendations for improving the quality of your MATLAB code.

Simulink Copilot

Simulink Copilot

Understand models, learn tools, and get design guidance with GenAI

Ask questions in the Copilot Chat panel and get responses based on your open model, relevant MathWorks® documentation and other resources.

Simulink Copilot helps you:

- Understand model functionality and algorithms, especially for models you did not design
- Identify features within your model and trace them to model elements
- Get guidance on refining your model
- Analyze errors and warnings, and get help in fixing them
- Learn about model-based design tools and techniques
- Execute and monitor development and validation tasks defined in Process Advisor
